

如图,实现了reset 复位,实现了button 开始与停止,实现了左右移动的改变(后面那段,比较小,需要仔细看),实现了频率的改变,最后按下button实现停止

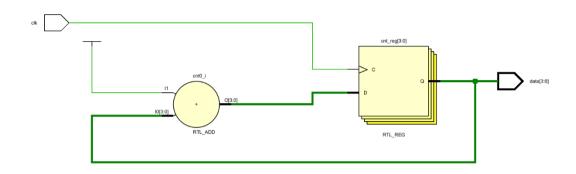

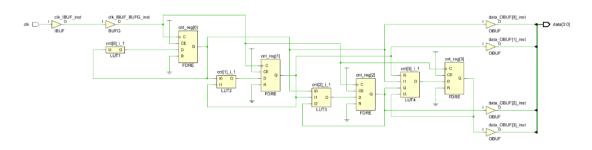

## 三个寄存器级联实现 but ton 上升沿的捕捉

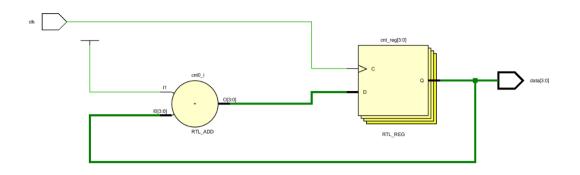

对比1 NONBLOCK

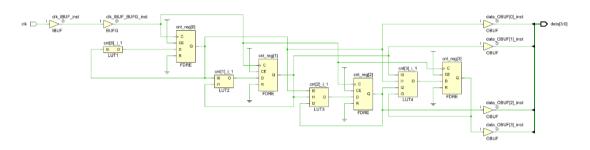

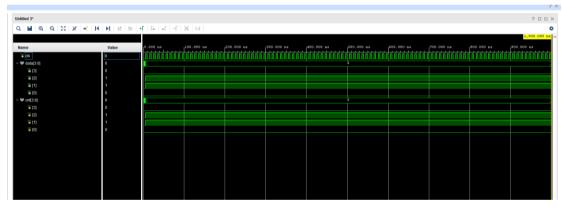

一个时钟周期后 cnt 是 1, 两个时钟周期后是 2

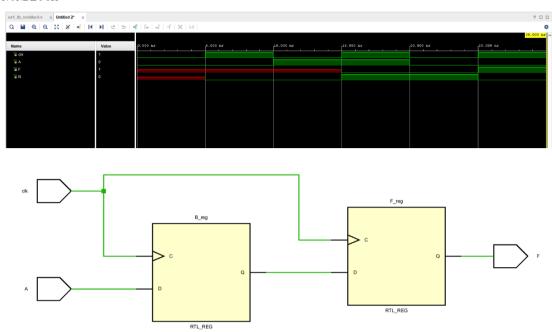

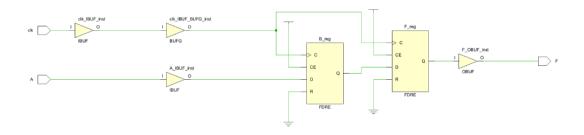

一个时钟周期后是 6,两个时钟周期后还是 6 电路图区别不大

## 对比2

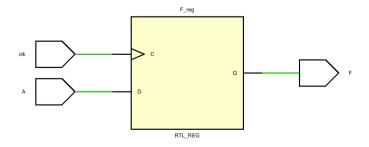

## NONBLOCK

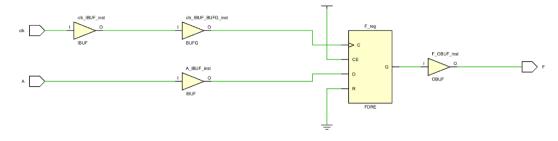

## BLOCK

一个是一个 D 触发器, 一个是两个 D 触发器

上面 BF 异步,下面 BF 同步
